

AIRPORT INNSBRUCK / AUSTRIA

Airport operations company

HIGH-CAPACITY
SEPARATOR

SYSTEM H-C2

PEHD INLINER

REQUIREMENTS:

- Construction of a separation system for the apron area
- Short time schedule for project implementation
- Permanent availability of the separation system for continuous operation
- Low maintenance costs
- Operational reliability must be guaranteed at all times
- Filterless and maintenance-free separator unit
- Avoidance of oil spills in the event of flooding, in particular due to the location of the airport

SOLUTION:

CONSTRUCTION OF A LARGE SEPARATOR SYSTEM IN COMPACT DESIGN:

- SYSTEM H-C2 NS80 l/sec high-performance separators with PEHD inliner
- Flood-proof oil storage tank
- Warning system with connection to control centre
