

# JAEGGI INDUSTRIES, SIBIU / ROMANIA

## Apparatus and equipment manufacturing

---

SYSTEM H-FR

### REQUIREMENTS:

- Jaeggi Industries is active in the field of apparatus and equipment engineering and attaches great importance to the careful use of resources and treating the environment responsibly
- During the production of heat exchangers, rinse water containing oil is produced when they are cleaned at the end
- This is to be recycled as far as possible

### SOLUTION:

- The rinse water, highly contaminated with oil and various other pollutants, is treated in a custom-made, free-standing, high performance SYSTEM H-FR NS 12 (12 l/s) separator
- Additional pre-separator with automatic oil extraction due to the high contamination of the waste water
- The automatic oil extractor was adapted to the specific production requirements of the customer (shift operation, idle times, etc.)
