

RESCH & FRISCH, Wels / Austria

Premium bakery products manufacturer

GREASE
SEPARATOR

PEHD INLINER

SYSTEM H-C3

SYSTEM C1

REQUIREMENTS:

- A waste water concept was required for the new construction of the workshop, the central warehouse and production
- Waste water containing grease from production
- Drainage of the workshop area and the vehicle washing areas
- Drainage of roof and open spaces
- Pumping stations were necessary in all areas due to on-site conditions
- Special attention had to be paid to environmental protection using the planning and implementation of the waste water treatment concept

SOLUTION:

- NS20 residual grease separator with PEHD inliner for treating production waste water
- High-performance SYSTEM H-C3 NS20 separator with integrated double pumping station for drainage of workshop and washing areas
- Two SYSTEM C1 retention basins with integrated double pumping station for drainage of open spaces
